

# Justine Longla T.

---

**Senior DevSecOps & Platform Architect | Founder, Justine Longla T-Lane LLC**

Cloud Confidence. Delivered. I don't just build systems — I version responsibility.

## The Core Philosophy: The Automation API Model

Instead of ad-hoc scripts and manual deployments, I treat infrastructure and automation as a standardized API. This ensures every technical action is predictable, validated, and reversible.

- API Intent — Define reliability and repeatability before implementation
- API Surface — Discoverable, reusable automation assets
- API Pipeline — Deterministic workflows from development to production
- API Safety — Guardrails that prevent failures before release
- API Assets — Composable automation primitives
- API Catalog — Searchable patterns and best practices
- API Error Handling — Graceful recovery and automated rollback
- API Contract — Release checklists and quality gates

## Operational Maturity & Internal Platform Governance

I operate my consulting practice using the same platform engineering and governance principles delivered to clients.

- Microsoft 365 business environment with structured identity and shared operational mailboxes
- 4-tier document governance architecture ensuring audit readiness and compliance traceability
- Structured compliance and financial recordkeeping with lifecycle management
- Automated legal and operational correspondence routing

## Project Spotlights

### Automation Rescue: Stabilizing Flaky Lambdas

Reduced production noise by over 60% by implementing retry policies, structured logging, and system-level guardrails.

### Blogs Break. Pipelines Don't.

Applied enterprise DevSecOps practices to static content platforms with deterministic builds, integrity gates, and semantic versioning for zero-risk publishing.

## **Live Ops & Security: Surgical Vulnerability Patching**

Closed high-priority security gaps with zero downtime using validated CI/CD pipelines and modernized configurations.

### **Technical Toolkit**

- Cloud: AWS, Azure, Vercel
- Tools: Terraform, Kubernetes, GitHub Actions, Prometheus, Grafana
- Specialties: Multilingual Architecture, Platform Engineering, CI/CD Security
